## Electro\_Optical\_Test Option for Easy\_Tester\_Pro and Smart\_Tester

Automatic check for Electro-Optical lenses

# Electro\_Optical\_Test Option for Easy\_Tester\_Pro and Smart\_Tester

## Automatic check for Electro-Optical lenses

Electro\_Optical\_Test Option is a revolutionary Hardware and Software Option for Easy\_Tester\_Pro and Smart\_Tester equipment that allows automatic check of Transmittance and Transmittance Uniformity of Electro-Optical Lenses at different activation states.

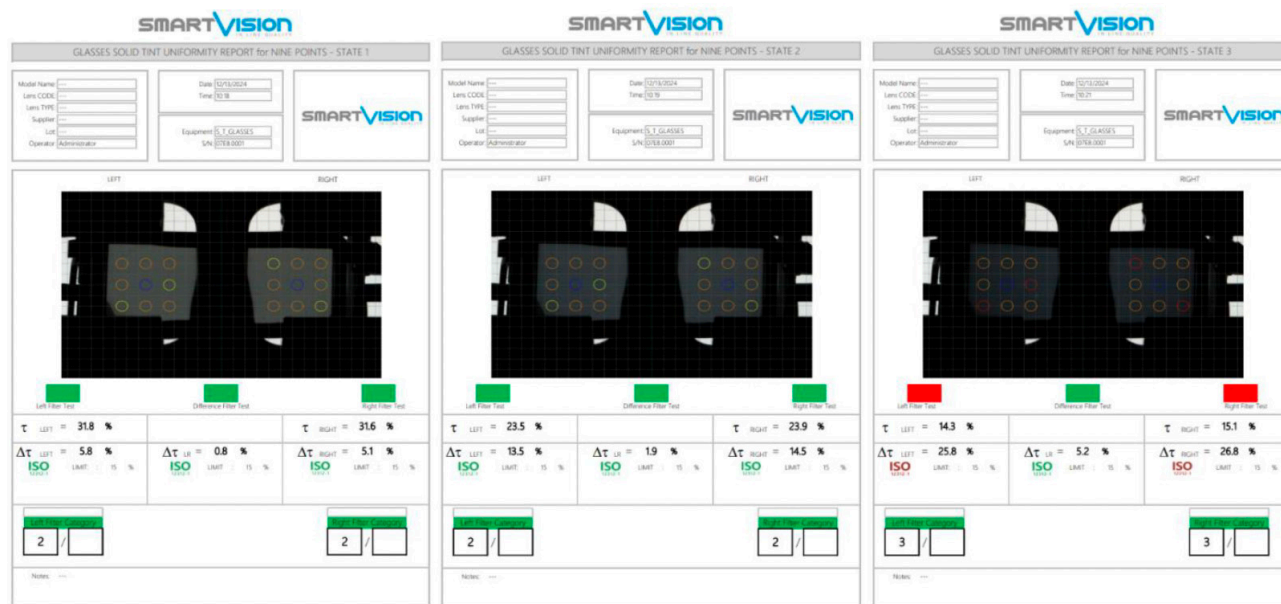

The software can activate the Electro-Optical lenses through:

- Analog Voltage
- Digital Output
- Serial Communication
- Light

SmartVision can customize the software and hardware to adapt this option to different types of Electro-Optical lenses.

With the automatic measurement cycle, it is possible to verify the following characteristics for each activation level:

- Transmittance
- Uniformity of Transmittance
- Transmittance Balance

### Advantages:

- Automatic measurement process of Electro-Optical Lenses
- Digital Master with all the parameters of the different activation states of the lenses
- Detailed characteristics verification report for each activation status
