SmartVision_Cloud_Service

Cloud-based data acquisition and analysis of process measurements

SmartVision_Cloud_Service is a revolutionary software suite for automatic acquisition of process measurements performed by SmartVision equipment.

The software can automatically acquire measurements from different SmartVision instruments placed in different geographical areas and make data available through the Web App to all authorized persons for statistical analysis and production trends.

SmartVision_Cloud_Service can manage measurements of:

- Transmittance Properties
- Uniformity of Transmittance
- Polar Axis
- Refractive Powers
- Shape
- Internal Stress
- Color

Through the Web App it will be possible to:

- Monitor the process in near real time
- Evaluate the trends of the measurements over time to verify the stability of the process

Advantages:

- Automatic Measurement Data Rescue
- Near Real Time Process Monitoring
- Statistical Evaluation of the Process over time
